

Hot-Air De-Ice

Walton De-Ice

Heated

The Walton Hot Air De-ice system is designed to prevent snow and ice fro m accumulating on the Satellite Earth Station Antenna. This Hot Air Deice Sy stem is the original Walton concept, with a plenum (enclosure) located on the rear of the antenna. Heater s (Gas or Electric) located on the antenna structure provide Hot Air for inside the plenum, which in turn heats the reflector surface to r emove or pre vent ice and/ or snow from accumulating.

Over the Past 29 years, Walton has updated the plenum and hea ters to eas e installation, and provide the most reliable and economical sat ellite antenna deicing system on the market toda y. In order to provide maximum flexibility, Walton offers Electric, Natural Gas, and Liquid Propane Gas Heaters so the customer can make their choice, based on the cost and availability of the fuel source at their location.

Unlike Electric Pad or Heat Tape Anti-ice, the Walton Hot Air De-ice Sy stem heats the entire Satellite Co mmunications Antenna Reflector and Back Structure uniformly. This minimizes the chance s of reflector distortion (which can cau se signal problems) caused by thermal expansion and contraction.

Most people agree that enclosing the back of the Satellite Earth Station Antenna makes it more esthetically pleasing. This enclosure will hide the unsightly support structure and will also prevent bir ds from nesting in the back structure of the antenna.

Please also see the W.B. Walton Heaters Data Sheet and Controls Data Sheet for additional information.

Key Features

- Prevents the accumulation of snow and ice on the Satellite Earth Station Antenna, which therefore prevents the Signal loss associated with snow and ice.
- Heat Source Flexibility Electric, Natural
- Gas and Liquid Propane Gas Heaters are available.
- De-icing System carries a **full two- year** warranty.
- De-icing system makes antenna more
- Esthetically pleasing.
- Technical Support available 24 hours a day 7 days a week.
